DIGITAL COLLABORATION

COMMUNICATE AND INTERACT WITH CLARITY

The workplace has evolved. More and more our working lives are driven by agility and mobility.

We are no longer tied to our offices. We are less frequently in the same building as our colleagues making achieving results even more challenging.

The ability to support these new work methods should be at the centre of every business' digital strategy. How do we stay connected? How do we ensure we maximize input? How do we share ideas openly and fluently? And most importantly, how do we support the flexibility of various software, hardware and bandwidth?

ENGIE

AV Technologies

Collaboration is a rapidly diversifying landscape, inclusive of everything from laptops, mobile devices, video conference endpoints, interactive panel displays and virtual environments. By ensuring your staff can collaborate on the devices they are most familiar with, you give your business the greatest environment for success.

You might be asking yourself, how does it all work together? Not everything in this environment plays well together, whereas some things play so well together that overlooking them may have your solution fall short of a brilliant capability set.

Perhaps your business is built on the back of long standing collaborative brands like Cisco or Polycom. Perhaps you've built your workflow around the new age of systems like Skype for Business, Slack, GoToMeeting or WebEx... It could be that your business supports any and all of these platforms. What's important is that it all works, first time, every time.

ENGIE Services AV Technologies takes a holistic approach to the design of collaborative solutions and collaborative spaces. We bring the senses together in one unique environment where sight, sound and touch are all engaged, making collaborating with co-workers as natural as if they were sitting right next to you, even if they're a world away.

We identify the untapped potential within your business to not only achieve your collaboration dreams, but to build your daily work practices around an infrastructure that is both stable and reliable as your business grows.

ENGIE SERVICES AV TECHNOLOGIES

WHERE THE PREMISE OF DESIGN IS THE POWER IN USER EXPERIENCE

TOUCH TECHNOLOGIES

Collaborate with your team in the most authentic way possible, using human based gestures that convey emotion and idea like nothing else.

REMOTE MANAGEMENT

Know that your system is 100% operational, 100% of the time with a custom designed support and maintenance schedule.

VIDEO CONFERENCING

Bring your team together, even if they are worlds apart, with a VC solution designed specifically to meet your business needs.
